This test contains **three** problems, each with multiple parts.

You must show all work for each problem to receive full credit.

**Always state which Fourier Transform Property or Pair is being used.**

**Problem 1.** You are given the Fourier Transform pair below

$$x(t) = \cos\left(\frac{\pi t}{2}\right) \text{rect}\left(\frac{t}{2}\right) \longleftrightarrow X(\omega) = \frac{4\pi \cos(\omega)}{\pi^2 - 4\omega^2}$$

(a) Determine the numerical value of  $A_1 = \int_{-\infty}^{\infty} X(\omega) d\omega$ ?

(b) Determine the numerical value of  $A_2 = \int_{-\infty}^{\infty} x(t) dt$ ?

(c) Determine and plot the Fourier Transform of

$$y(t) = \frac{4\pi \cos(t)}{\pi^2 - 4t^2}$$

- (d) Determine the numerical value of the energy of  $y(t)$  defined in part (c),  $E_y = \int_{-\infty}^{\infty} y^2(t) dt$ .  
The following results may be helpful:  $2 \cos^2(x) = 1 + \cos(2x)$  and  $\int \cos(x) dx = \sin(x)$ .

**Problem 2.** Consider an LTI system with impulse response

$$h(t) = \pi \frac{\sin(t)}{\pi t} \frac{\sin(5t)}{\pi t} 2j \sin(6t)$$

**Plot the frequency response,  $H(\omega)$ , for this system** in part (a) (you need this for each part) and determine the respective output for each input below (four parts = four different inputs). **Write a closed-form expression for the output in the time domain for each part.**

(a)  $x_1(t) = 2 \cos(6t) = e^{j6t} + e^{-j6t}$

$$(b) \quad x_2(t) = \sum_{k=-\infty}^{\infty} \left(\frac{1}{2}\right)^{|k|} e^{j2kt}$$

(c) this part is tricky:  $x_3(t) = \frac{\sin(2t)}{\pi t}$

(d)  $x_4(t) = \left\{ \frac{\sin(2t)}{\pi t} \right\}^2 2j \sin(6t)$

**Problem 3.**

- (a) Plot the Fourier Transform  $X_1(\omega)$  of  $x_1(t)$  below. ALSO, determine the energy of  $x_1(t)$ ,

$$E_{x_1} = \int_{-\infty}^{\infty} x_1^2(t) dt.$$

$$x_1(t) = \frac{\pi}{2} \left\{ \frac{\sin(2t)}{\pi t} \frac{\sin(8t)}{\pi t} \right\}$$

- (b) Plot the Fourier Transform  $X_2(\omega)$  of  $x_2(t)$  below. What is the energy of  $x_2(t)$ ,

$$E_{x_2} = \int_{-\infty}^{\infty} |x_2(t)|^2 dt?$$

$$x_2(t) = \left\{ \frac{\pi}{2} \left\{ \frac{\sin(2t)}{\pi t} \frac{\sin(8t)}{\pi t} \right\} \right\} e^{j10t}$$

(c) Determine a closed-form expression for the Fourier Transform  $X_3(\omega)$  of  $x_3(t)$  plotted below. (You do NOT need to plot  $X_3(\omega)$ .) *Hint: Duality.* What is the energy of  $x_3(t)$ ,

$$E_{x_3} = \int_{-\infty}^{\infty} x_3^2(t) dt?$$

- (d) Determine a closed-form expression for the Fourier Transform  $X_4(\omega)$  of  $x_4(t)$  below. Plot  $x_4(t)$ . (You do NOT need to plot  $X_4(\omega)$ .) What is the value of  $E_{x_4} = \frac{1}{2\pi} \int_{-\infty}^{\infty} |X_4(\omega)|^2 d\omega$ ?

$$x_4(t) = \frac{1}{4} \text{rect} \left\{ \frac{t-2}{4} \right\} * \text{rect} \left\{ \frac{t-8}{16} \right\}$$
