Abstract

Boeing Phantom Works engineers and leaders of the Special Pursuits Cell will present an exciting and informative behind-the-scenes look at advanced manufacturing techniques and how rapid prototyping is a game-changer in today’s defense industry. Learn how Boeing’s investments in research and development are paying off and allowing the company to offer more for less, a key discriminator in the industry’s budget-constrained environment. Real-life examples of innovative Phantom Works projects like Phantom Eye, Phantom Swift, Phantom Ray and Phantom Badger will be discussed.
