Design teams need to be formed as soon as possible. Tentative assignments for individual team members are outlined in the Team Member Assignments handout.

Please email the following information to me by the above time:

1. Name, email address, phone number

2. Your area of concentration within AAE (structures, aerodynamics, dynamics, controls, or propulsion)

3. The three team member assignments you are most interested in, in order of preference, from most to least preferred.

4. A list of any advanced courses that you have taken or are taking, which are specially likely to aid you in this course (e.g. AAE532, AAE519, AAE439, etc.).

5. Any other information that you believe is important.

The design groups need to be balanced. Each group should have a balance of people interested and trained in the different subdisciplines, so that people are doing design work in their own specialty if possible. The groups should also contain a balance of students with different levels of achievement, as measured primarily by GPA.

I encourage you to form teams on your own according to these guidelines, and to suggest them to me. I will make or approve the final assignments by Tuesday 2 Sept.
