Closed circuit trickle irrigation is a form of micro irrigation that increases energy and water efficiency by using closed circuit drip irrigation systems designs. Modifications are made to traditional micro irrigation methods to reduce some of the problems and constraints, such as low compressor water at the end of irrigation lines. This approach has proved successful for the irrigation of fruit trees and some vegetable and field crops. Closed circuits of drip irrigation systems require about half of the water needed by sprinkler or surface irrigation. Lower operating pressures and flow rates result in reduced energy costs, and a higher degree of water control is attainable as well. Plants can be supplied with more precise amounts of water, and disease and insect damage is reduced because plant foliage stays dry. Fertilizers can also be applied through this type of system, which can result in a reduction of fertilizer and fertilizer costs.

This new volume in the Research Advances in Sustainable Micro Irrigation book series presents a diverse collection of research on closed circuit irrigational technology and design and provides studies of its use on such crops as wheat, maize, yellow corn, soybeans, rice, and snap peas.

The book explores:
- soil moisture and salinity distributions under modified sprinkler irrigation
- performance of sprinkler irrigation
- design considerations for closed circuit drip irrigation systems
- performance of bubbler irrigation
- energy and water savings of drip irrigation systems
- automation of mini-sprinkler and drip irrigation systems
- water and fertilizer use efficiencies for drip irrigated maize
- evaluation of emitter clogging for drip irrigated systems
- and more

This book will be valuable for those interested in irrigation planning and management, namely, researchers, scientists, educators, upper-level students, agricultural extension services, and others.
Closed Circuit Trickle Irrigation Design

Theory and Applications

11. Performance of Drip Irrigated Soybean
M. Y. Tayel, H. A. A. Mansour, and S. Kh. Pibars

12. Drip Irrigation in Rice
R. K. Sivanappan

13. Evaluation of Emitter Clogging for Drip Irrigated Snap Beans
S. Kh. Pibars, H. A. A. Mansour, M. Abd El-Hady, and E. I. Eldardiry

14. Evaluation of Emitter Clogging
M. Y. Tayel, S. Kh. Pibars and H. A. A. Mansour

15. Evapotranspiration for Cypress and Pine Forests: Florida, USA
David M. Sumner

Index

Books in the Research Advances in Sustainable Micro Irrigation series:
Senior Editor-in-Chief: Megh R. Goyal, PhD, PE
Volume 1: Sustainable Micro Irrigation: Principles and Practices
Volume 2: Sustainable Practices in Surface and Subsurface Micro Irrigation
Volume 3: Sustainable Micro Irrigation Management for Trees and Vines
Volume 4: Management, Performance, and Applications of Micro Irrigation Systems
Volume 5: Applications of Furrow and Micro Irrigation in Arid and Semi-Arid Regions
Volume 6: Best Management Practices for Drip Irrigated Crop
Volume 7: Closed Circuit Micro Irrigation Design: Theory and Applications
Volume 8: Wastewater Management for Irrigation: Principles and Practices
Volume 9: Water and Fertigation Management in Micro Irrigation

Approx. 375 pages with index.

$149.95 US | £95.00 hardback. Available July 2015.
