

Undergraduate Research Assistant Position

Our research team is looking for a responsible, highly motivated, and enthusiastic student with a strong interest in animal science to join the laboratory. We foster a supportive and innovative working environment both in the laboratory and at the farm. No laboratory or animal handling experience necessary but must have a strong desire to learn. Research areas include molecular biology, nutrition, and physiology of domestic livestock. Opportunities exist for continued employment through semester and semester breaks pending good academic and professional standing.

This may be the experience you are seeking if you are considering Graduate School or a career in science. The hours are flexible, but hours outside of the normal 8am to 5pm workday may be requested by supervisory personnel.
