Dr. Flanagan,

I have a new project that is closely related to the work that I did at the National Soil Erosion Lab for my MS degree and I am looking to hire several people to work on the project at the University of Arizona. I am looking for MS or PHD students, but if I cannot find somebody to start this fall (semester starts on August 26th) I am open to hire a postdoctoral scientist. The students would examine the overland transport of military-related compounds. We are looking for expertise in runoff generation, soil erosion, and transport of organic compounds in overland flow in solution and in sediment. Familiarity with the interactions between organic compounds and soils is a plus. Can you share this information with the students/scientists that may be potentially interested or recommend any potential candidates? I would greatly appreciate this. I also contacted Dr. Huang to see if he knows somebody.

Thank you

Sincerely

Katerina
