Internship Philosophy

The undergraduate internship program of the Weldon School of Biomedical Engineering is an opportunity to enhance the training of future biomedical engineers. The goals of this program are to:

- Provide a practical, supervised engineering experience
- Stimulate independent critical thinking
- Reinforce curriculum through experiential learning
- Clarify career goals and interests
- Facilitate professional development
- Promote importance of good communications skills
- Provide an experience that will lead from internships to careers
- Build long-lasting relationships with industrial partners

Possible Training Areas

Sponsoring companies may choose to place interns in a variety of roles. We encourage meaningful projects wherever they might be. Our students are available to work in a wide range of areas including:

- Research
- Product Development
- Manufacturing
- Operations
- Regulatory Affairs
- Marketing
- Sales
- Finance
- Public Relations

Internship Logistics

Purdue biomedical engineering students apply to the internship program, are interviewed, selected, and matched with companies based on interests and available projects. Students are prepared for the internship through a seminar and workshop series covering ethics, harassment prevention, safety, project management, and professional behavior. Interns communicate with designated faculty mentors throughout the internship for additional advice and counseling. At the conclusion of the internship both the interns and the companies evaluate the experience and the interns present a project summary to their supervisor and to their peers.

Sponsor Benefits

- Interact with high-quality students as prospective employees
- Develop a closer relationship with the Weldon School of Biomedical Engineering
- Initiate research relationships with Purdue faculty
- Raise company awareness at Purdue
