

The Future of Internships in CEM

When Opportunity Knocks

The CEM – Industrial Partnership ...where knowledge meets experience

Dr. Deanna McMillan,
Candidate for Director of Internships

One of the primary advantages of enrollment in Purdue's rigorous Construction Engineering & Management (CEM) curriculum is access to the summer internship program. This program provides students with a unique opportunity to experience a dynamic industry work environment.

The Purdue University CEM experience is enhanced by partnering with premiere Industrial representatives – active in all aspects of construction and engineering practice.

My vision of excellence involves a collaborative effort of educators and construction practitioners to create the possibility of a long-term career in construction for every student. This effort is achieved through preparation in class work by linking course materials to the needs of our industrial partners. The goal of the CEM Intern experience is to offer students a training environment where they can offer quality technical solutions to meet compelling business needs.

Dr. McMillan completed her Civil Engineering-Construction & Management studies at Penn State University. She served as an Assistant Manager for Bell of Pennsylvania, and established her own Construction Management and Facility Design firm, specializing in renovation, rehab and development in urban commercial and residential areas. Currently, she serves as the Capital Systems Project Manager for Procter & Gamble.
