Common Practice: Chemicals are discharged into the environments within neighborhoods next to roadways. Purdue research at CIPP worksite.
CIPP chemicals can enter nearby buildings and public spaces

Private Property
(NOT for contractors)

HVAC Intake

 Doors

Sump Pump

HVAC Vent

Uncured resin tube in pipe

Utility/City Property
(Worksite only for contractors)

Approx. 5-15 psi air or steam pressure used against the uncured resin tube

Direct closed pipeline to buildings!

Cracked Sewer Lateral

Uncured resin tube in pipe

Manhole

While Contractors work at the street....
Their chemical waste leaves their worksite – traveling above and below ground.
Contractors blow chemical waste into buildings and the environment
