### Laboratory Safety Check-Out Procedure

The following tasks must be completed for a successful Laboratory Safety Check-out:

- Chemicals and gases purchased must be transferred to other lab members
- All waste needs to be called out to REM
- Materials you produced or synthesized need to be managed by you and your major Professor. If they are to stay in the lab, ownership must be transferred to another lab member
- The lab area you are responsible for must be clean – this includes refrigerators, dry boxes, portions of other labs (also in other buildings), instruments, etc.
