

We are inviting adult participants for a neuroimaging study of
Language, Perception, and Cognition
as part of the study titled
Neuroimaging to Advance Computer Vision, NLP, and AI.

You will listen to audio and view text, still images, video, and/or sign language and respond to questions about them, while undergoing functional magnetic resonance imaging (fMRI).

You can see an image of your brain!

To be eligible to participate, you must meet the following 4 conditions:

- a. You must be a native English speaker from birth.
- b. You must be right-handed.
- c. You must not have any metal implants.
- d. You must be willing to participate in 9 four-hour visits.

Due to equipment availability, each four-hour visit will comprise two back-to-back sessions lasting about two hours each, with a short break in the middle.

You will be paid \$35 for each session.

To participate in the study, please email us at
qobi@purdue.edu

The study is conducted by Drs. Siskind and Wilbur, Purdue University.
