Go Electric™

Test and Controls Engineer

Summary
Go Electric is a green-tech startup developing energy services solutions that accelerate a renewable energy future. Our solutions seamlessly integrate renewable energy with generators and batteries to provide uninterruptible power to facilities and grid services to utilities. The company is growing rapidly and is seeking an experienced Test and Controls Engineer for key product development projects. This is a full time direct position.

Responsibilities
- Primary responsibility is to ensure that products perform to their requirements.
- Assist in the design, assembly, calibration, and troubleshooting of electrical control systems and electrical power circuits.
- Coordinate the production of drawings, documentation, manuals and reports.
- Conduct research and create design proposals for projects.
- Assist in identifying and selecting components.
- Coordinate with suppliers and customers and track costs involved in production.
- Travel to outside facilities to evaluate product performance, troubleshoot product and process issues and assist it on site installation.
- Administer the validation of various new products and services.

Qualifications
- Bachelor’s degree in engineering, engineering technology or extensive experience in the field.
- Strong working knowledge of control systems including 3 phase motor controls, instrumentation, data communications, and electrical wiring practices.
- Minimum 3 years’ experience in the utility equipment, distributed energy, 3-phase generators/motors, advanced batteries or power electronics industry.
- Ability to obtain government security clearance.
- Proficient in Microsoft office suite (word, excel, power point).
- Excellent communication and organizational skills.
- Proficient in AutoCAD.
