

The Distributed Multimedia Systems Laboratory, located in the School of Electrical and Computer Engineering at Purdue University, provides a world-class facility to conduct research in multimedia systems. The laboratory facilities include several high-end servers all interconnected over a suite of heterogeneous high-speed laned and wireless networks consisting of ATM switches, wireless LANS and Fast Ethernets. Collectively, these servers provide a heterogeneous distributed multimedia database environment. This environment is used to conduct both theoretical and experimental research in multimedia database management and broadband multimedia networking technology.
