A Short Example

Mark Senn

May 25, 1999

1 Preface

This is a short LaTeX example.

LaTeX can do cross referencing. Equation 1 in section 2 on page 1 shows some math examples.

2 Math

The sum of all integers between 1 and n is $n(n+1)/2$. Let's use "display math" to emphasize that fact:

$$\sum_{1}^{n} = \frac{n(n+1)}{2} \tag{1}$$

3 Tables

LaTeX can also do tables and figures (pictures).
