School of Industrial Engineering

Interdisciplinary Undergraduate Concentration in Software Engineering

Seminar Attendance Assignments Documentation

**Description:**

The purpose of the seminar requirement is for each student to reflect on the breadth and depth of the field of software engineering. As such, the following requirements are expected to document attendance and participation in available seminars.

1. Notify Dr. Brunese of the seminar that you will attend, with any associated documentation of the seminar.
2. Submit a summary of the seminar.

**Summary Assignment Details:**

The summary of the talk must consider the following:

1. The key elements of the talk as they relate to the field of software engineering. Particular emphasis should be placed on where the talk fits within the software development lifecycle.
2. The potential for the topic of the talk to contribute to the field of industrial engineering. Specifically, does the software (or model) developed have potential for impact in human-integrated systems in which IEs typically work, or could work.

There is no specific grading rubric for assessing the submitted summary. The assignment is primarily reflective and will be acceptable for completing the requirements of the specialization so long as the summary is well formatted and written.

The summary should be submitted to Dr. Brunese in the IE undergraduate studies office.
