

Memorandum

To: The Faculty of the College of Engineering

From: Environmental and Ecological Engineering

Date: September 1, 2022

RE: Fast track EFD 14-23

Add additional major* to EEE 69800 and 69900

Reason: A number of ESE students are enrolling in research with EEE. Currently there is a "major" restriction on research credits to only EEE. We want to add IESE as another allowable major.

*major is the preferred term that the registrar uses when classifying graduate students. The term major has no academic bearing in the EEE program and associated documentation.

John W. Sutherland, Ph.D.
Professor and Fehsenfeld Family Head
Environmental and Ecological Engineering

About IESE: Students who are interested in being a part of the Ecological Sciences and Engineering Interdisciplinary Graduate Program can apply directly using the Graduate School application and selecting IESE - Interdisciplinary Ecological Sciences and Engineering.

ESE has partnerships with many of Purdue's academic departments. Students in the ESE program will also be a part of one of ESE's associated academic departments, which is the degree granting unit. Typically this will be the same academic department of their major faculty advisor. Students will be a part of the student community in both ESE and their academic department.

ESE students will complete degree requirements for ESE and any requirements for their home academic department.

Current Engineering Departments with a formal association with ESE include: AAE, ABE, CIVL, ENE, EEE, IE
