PURDUE UNIVERSITY
REQUEST FOR ADDITION, EXPIRATION,
OR REVISION OF AN UNDERGRADUATE COURSE
(10000-49000 LEVEL)

DEPARTMENT School of Engineering Education
EFFECTIVE SESSION Fall 2013

INSTRUCTIONS: Please check the items below which describe the purpose of this request.

☐ 1. New course with supporting documents
☐ 2. Add existing course offered at another campus
☐ 3. Expiration of a course
☐ 4. Change in course number
☐ 5. Change in course title
☐ 6. Change in course credit type
☐ 7. Change in course attributes (department head signature only)
☐ 8. Change in instructional hours
☐ 9. Change in course description
☐ 10. Change in course requisites
☐ 11. Change in semesters offered (department head signature only)
☐ 12. Transfer from one department to another

PROPOSED:

Subject Abbreviation: ENGR
Course Number: 2010

COURSE DESCRIPTION (INCLUDE REQUISITES/RESTRICTIONS):

This course provides students with opportunities to study how engineering is intertwined with larger economic, social, cultural, and technological dynamics in an era of intensified globalization. Its major goals are to help students understand and appreciate what engineering is, how engineers are trained, what engineers do, and how engineering and society interact. The course approaches these themes through discussion of the relation and interaction of engineering, science, technology, and society; the historical origins and development of engineering as a profession; diversity issues in engineering and other STEM fields; engineering in cross-national/cultural contexts; and contemporary trends and issues related to globalization, ethics, social responsibility, and sustainability. Pre requisites: None

*COURSE LEARNING OUTCOMES:

1. Describe and evaluate the specific kinds of knowledge and methods typically employed by engineers, including in comparison with other professional fields; 2. Understand the historical development of engineering education and the engineering profession in the United States; 3. Recognize how national differences are important in engineering work, including by comparing and contrasting different national cultures and styles of engineering; 4. Explain the significance of diversity in engineering education and professional practice, including by evaluating competing perspectives on diversity in different historical and sociocultural contexts; 5. Understand contemporary trends and issues related to globalization, ethics, social responsibility, and sustainability, and interpret their significance in relation to engineering education.

RE: New Undergraduate Course: ENGR 20100 – Engineering in Global Context

The faculty of the School of Engineering Education have approved the following new course. This action is now submitted to the Engineering Faculty with a recommendation for approval.

ENGR 20100 Engineering in Global Context
    Sem. 1 and 2, Cr 3
    Requisites, Restrictions, and Attributes: None

Description: This course provides students with opportunities to study how engineering is intertwined with larger economic, social, cultural, and technological dynamics in an era of intensified globalization. Its major goals are to help students understand and appreciate what engineering is, how engineers are trained, what engineers do, and how engineering and society interact. The course approaches these themes through discussion of: the relation and interaction of engineering, science, technology, and society; the historical origins and development of engineering as a profession; diversity issues in engineering and other STEM fields; engineering in cross-national/cultural contexts; and contemporary challenges related to globalization, ethics, and sustainability. In summary, the course is designed to help students understand what it means to identify as, and/or work with, engineers. Recitation sections and/or independent projects (at the instructor's discretion) provide further opportunities for students to expand their knowledge and improve their skills in relation to course themes.

Reason: This course responds to growing demand for technically-astute engineering graduates who better understand the development and contemporary status of their profession, and who can work effectively across countries and cultures. More specifically, the course addresses multiple ABET 3.a-k outcomes, including (f) professional and ethical responsibility, (g) communicate effectively, (h) understanding the impact of engineering solutions in a global, economic, environmental, and societal context, and (j) knowledge of contemporary issues. By involving substantial numbers of non-engineering students, the course also helps remedy public misunderstandings about engineering, while building bridges between students from across the university. We expect the course will mainly fulfill Core Curriculum requirements for engineering and non-engineering students. It will be nominated in the Core Curriculum STS category, addressing learning outcomes in the following areas: Human Cultures, Ethical Reasoning, and Global Citizenship and Social Responsibility. The proposing faculty will work with units across campus to determine how the course meets specific plan of study requirements, with emphasis on degree programs in engineering, business, STEM education, and technology.
Engineering in Global Context is significantly based on Engineering Cultures, an undergraduate elective course originally developed at Virginia Tech and offered more than 50 times to more than 3,000 students since 1989, including in face-to-face and online formats. Prof. Jesiek, the main developer of Engineering in Global Context, served as teaching assistant or instructor for Engineering Cultures eight times while at Virginia Tech, and was also a content developer. During Spring 2012, Engineering in Global Context was piloted by Prof. Harris as ENGR19500-004 with three students completing the class. The results were positive and there is enthusiasm for approving the course and scaling up enrollment. However, the lack of a permanent course number is a major barrier, as ENGR195 classes often map poorly to plan of study requirements.

David F. Radcliffe
Kamyar Haghighi Head, School of Engineering Education
Epistemology Professor of Engineering Education

APPROVED FOR THE FACULTY OF THE SCHOOLS OF ENGINEERING BY THE ENGINEERING CURRICULUM COMMITTEE

COURSE DESCRIPTION

This course examines how engineering is intertwined with larger economic, social, cultural, and technological dynamics in an era of intensified globalization. Its major goals are to help you understand and appreciate what engineering is, how engineers are trained, what engineers do, and how engineering and society interact. The course approaches these themes through discussion of: the relation and interaction of engineering, science, technology, and society; the historical origins and development of engineering as a profession; diversity issues in engineering and other STEM fields; engineering in cross-national/cultural contexts; and contemporary challenges related to globalization, ethics, and sustainability. In summary, the course is designed to help students understand what it means to identify as, and/or work with, engineers. Recitation sections and/or independent projects provide further opportunities to expand your knowledge and improve your skills in relation to the major course topics and themes.

COURSE LEARNING OUTCOMES

Students who successfully complete this course should have the ability to:

1. Describe and evaluate the specific kinds of knowledge and methods typically employed by engineers, including in comparison with other professional fields,
2. Understand the historical development of engineering education and the engineering profession in the United States,
3. Recognize how national differences are important in engineering work, including by comparing and contrasting different national cultures and styles of engineering,
4. Explain the significance of diversity in engineering education and professional practice, including by evaluating competing perspectives on diversity in different historical and sociocultural contexts,
5. Understand contemporary trends and issues related to globalization, ethics, social responsibility, and sustainability, and interpret their significance in relation to engineering education and practice, and
6. Demonstrate written communication capabilities at the level of “emerging” or higher (as defined by the Purdue Core Curriculum guidelines).
READING LIST/TEXTBOOK

There is no required textbook for this class. However, key papers are assigned during the semester. Extensive lecture slides are also made available to students. Readings are mainly from:

COURSE SCHEDULE and OUTLINE

ASSIGNMENTS and GRADING

NOTES: Relevant learning objectives indicated in brackets. (I) indicates individual assignment, (G) indicates group assignment, and (I+G) indicates mix of individual and group assignment components. Typical expected minimum length of each assignment is 500-1000 words.

Assignment #1: Reflecting on Dominant Images and Personal Pathways [O4, O6] (I)
This assignment challenges students to describe their personal pathway into engineering (or another field), including by discussing the images and forces shaping their perceptions and decisions. They are also asked to discuss their motivations and goals with respect to the course.

Assignment #2: Engineering Problem Solving with People [O1, O6] (I)
In this assignment, students read a historical case study about developing a new type of engine at General Motors in the 1920s, highlighting tensions between design and manufacturing. They are asked to analyze the two main perspectives using a framework from class. (See full text below.)

Assignment #3: Case Histories - American Engineering [O2, O6] (I)
Since the course can formally cover only a small fraction of the history of U.S. engineering education and practice, this assignment gives students an opportunity to delve more deeply into a historical case of their choosing, including by writing a critical summary and review of the case.

Assignment #4: Develop Your Own Reform Movement [O4, O6] (I)
This assignment asks students to create a formal memo describing a proposal for reforming how students are educated in engineering (or, for non-engineers, their current field of study).
They are asked to make a persuasive case by using empirical evidence and responding to competing views. Students are particularly encouraged (but not required) to address diversity issues and themes.

Assignment #5: Engineers in Dialog [O3, O5] (G)
Working in groups, students first imagine a team of engineers from three or more countries coming together around a shared project or problem. They then write a dialog/script highlighting how the engineers might interact, each potentially influenced by their unique cultural background.

Assignment #6: Case Studies – Ethics and Social Responsibility [O5, O6] (I)
Students select a case study involving issues of ethics and/or social responsibility in engineering. They are then asked to write a systematic analysis of the case to identify the key stakeholders, relevant moral theories and factors, and possible courses of action and their implications.

Assignment #7: Final Project Report and Presentation [O6, others TBD as relevant] (I+G)
Involves collaboratively writing a ~10-15 page research report on the historical development and/or current status of engineering education and practice in a country not discussed in class, and delivering a 10-minute presentation (with 10-20 PowerPoint slides) summarizing the findings.

Sample Assignment #2: Engineering Problem Solving with People [O1, O6] (I)
Stuart Leslie’s article “Charles F. Kettering and the Copper-cooled Engine” highlights a struggle between two different engineering perspectives working towards a copper-cooled engine for General Motors. For this assignment, you will apply the Engineering Problem Solving with People framework to systematically analyze the two major perspectives in this case. First, write a one-paragraph summary of the article. Then adopt Kettering’s perspective and in approximately one paragraph describe his location (organizational, geographical, etc.), knowledge (including skills, expertise, etc.), and desire (personal and professional goals). Then turn to the perspective of the manufacturing engineers and production staff, and in another paragraph describe their location, knowledge, and desire. Finally, in a concluding paragraph develop your own critical assessment of this case study, including by giving your interpretation of the biggest gaps in perspective between the two main stakeholder groups. Make sure you discuss how such issues might be remedied or addressed, and by whom.

**LATE POLICY/ATTENDANCE**

1. Attendance at all classes is EXPECTED. Excessive absences may result in penalties up to a failing grade in the class and may be reported to the Dean of Students for appropriate action. Any adverse circumstances that may impact your ability to attend and/or participate in the class should be proactively discussed with the course instructors.

2. All homeworks are due at the beginning of each class. Late homework is NOT accepted.

3. All quizzes and/or exams are closed book and closed notes.

4. There are no makeup quizzes or exams.

5. You are expected to act ethically and professionally. Do NOT submit work (homework, quizzes, or exams) that is not entirely your own work (or the work of your group, when indicated). Evidence of cheating and other forms of dishonesty will result in penalties up to a failing grade in the course and reporting the violation to the Dean of Students.

6. Excessive talking or other distractions (e.g., surfing the web) during lectures and other class activities constitutes a lack of class participation, and may result in the lowering of your overall grade up to failure of the course.

**REASONABLE ACCOMODATION POLICY**

If you are a person with special circumstances that may affect your class performance (e.g., visual, hearing or learning disabilities or language differences) please let us know so that we can discuss and make appropriate accommodations.

**EMERGENCY PROVISIONS**

In the event of a major campus emergency, course requirements, deadlines and grading percentages are subject to changes that may be necessitated by a revised semester calendar or other circumstances. Here are ways to get information about changes in this course: Blackboard course web page, instructors’ e-mail, and instructors’ office phone.
