TO: The Faculty of the Schools of Engineering  
FROM: The Faculty of the School of Civil Engineering  
DATE: February 25, 2003  
SUBJECT: Change of Course Requirements for the Degree of Bachelor of Science in Land Surveying Engineering

The Faculty of the School of Civil Engineering has approved four modifications to the curriculum for the Bachelor of Science in Land Surveying Engineering resulting in an increase in the total credit hours required for the degree from 133 to 136. This action is now submitted to the Engineering Faculty with a recommendation for approval.

Current and proposed curricula are attached as well as current and proposed suggested plans of study. Detailed descriptions of proposed changes are provided along with reasons for these proposed changes.

APPROVED FOR THE FACULTY OF THE SCHOOLS OF ENGINEERING  
BY THE COMMITTEE ON FACULTY RELATIONS

*Eighteen credit hours of general education electives, in addition to the freshman speech and composition requirements, must be chosen in accordance with the requirements of the School of Civil Engineering.
†This elective must be chosen from EE 201, EE 343, or ME 200.
‡A minimum of two of the technical electives must be selected from a list of courses approved by the land surveying engineering faculty.
Curriculum in Land Surveying Engineering - Proposed

The BSLSE program has a minimum of 136 credit hours including the Freshman Engineering Requirements. Divided into topical areas the curriculum is:

Credit Hours Required for Graduation: 136

*Eighteen credit hours of general education electives are chosen in accordance with the general education requirements of the Schools of Engineering and the following departmental requirements:

1. The program must contain at least 6 credit hours in the humanities (visual and performing arts, English literature, foreign languages and literatures, history, or philosophy).

2. The program must contain at least 6 credit hours in social sciences (anthropology and speech sciences, communication, economics, political science, psychology, or sociology and anthropology). It is strongly recommended that ECON 251 be included in the program in social sciences.

†A minimum of two of the technical electives must be selected from a list of courses approved by the land surveying engineering faculty.
Reasons for the proposed changes to the curriculum are explained in detail below:

Change 1: Replace CE 200 Fundamentals of Surveying in the curriculum with CE 203 Principles and Practice of Geomatics
   Reason: Replacing CE 200 - 3 credit hours (2 lectures and 1 lab) with CE 203 - 4 credit hours (3 lectures and 1 lab) will allow needed expansion of coverage of surveying topics and inclusion of the introduction and application of engineering problem solving software.

Change 2: Replace CE 292 Oral and Written Communications for Civil Engineers with CE 399 Oral and Written Communications for Civil Engineers
   Reason: The ability to communicate engineering ideas in an effective manner is critically important. This was a needed area of improvement identified through the recent Outcomes Assessment process. This will be accomplished by replacing CE 292 having 1 credit hour with CE 399 having 3 credit hours and placing it in the junior year, thus better coupling it with LS 400 Summer Geomatics Engineering Design Project and LS 409 Subdivision Planning and Design, the senior design project, wherein significant additional written and oral presentation experience is mandated.

Change 3: Replace IE 343 Engineering Economics with CE 398 Introduction to Civil Engineering System Design
   Reason: This new civil engineering course will include engineering economics and systems analysis that is more closely related to land surveying and geomatics engineering practice. The course will introduce students to the engineering design method and better prepare them for our design sequence of courses, LS 400 Summer Geomatics Engineering Design Project, CE 511 GPS Surveying in the spring semester, and LS 409 Subdivision Planning and Design in the spring semester.

Change 4: Replace STAT 301 Elementary Statistical Methods in the curriculum with STAT 511 Statistical Methods
   Reason: STAT 511 is a calculus-based course better suited to engineering students. The new requirement will be in line with the other curricula in the School of Civil Engineering.

Fred L. Mannering, Head
School of Civil Engineering
