ME 365

SYSTEMS, MEASUREMENTS AND CONTROL I

- 1. Provide a *fundamental knowledge* of systems, measurements and control. [1, 2]
- 2. Provide an introduction to the concept of *feedback control*. [1, 2]
- 3. Gain knowledge of the practice and art of modeling, measurements and control through laboratory experiments. [1, 2, 4, 7]
- 4. Provide hands-on experiences with take-home projects and in-lab experiments [3, 5, 6]
- 5. Sharpen technical communication skills. [3, 5]

Complementary	Hands-on Home Projects and Laboratory Experiments	
Project 1: Digital signals	Laboratory 1: Practical lab skills	
Project 2: Transfer functions	Laboratory 2: Balancing beam	
Project 3: First and second order systems	Laboratory 3: System identification	
Project 4: Signal spectrum analysis	Laboratory 4: Electromechanical system	
	Laboratory 5: Flow measurements	
	Laboratory 6: Noise reduction	

TEXTBOOK/REQUIRED MATERIAL: Provided notes and online videos PR COORDINATING FACULTY: G. B. King Materia COURSE DESCRIPTION: The fundamentals of dynamic systems are reviewed, including modeling of mechanical, electrical, fluid, and thermal systems containing elements such as sensors and actuators used in feedback control systems. Analytical and experimental techniques of general importance in systems engineering are presented. Engineering measurement fundamentals, including digital and frequency domain techniques, noise, and error analysis are covered. Simple proportional controllers are used to convey the benefits of feedback control. Hands-on projects and laboratories are utilized to reinforce fundamental measurement and control system concepts. Courses Set to reinforce fundamental measurement and control system concepts. ASSESSMENTS TOOLS: 1. Weekly homework assignments and hands on home projects. 2. Laboratory assignments. 3. Online quizzes for each lecture. 4. Two 1-hour mid-term exams. 5. One comprehensive final exam NATURE OF DESIGN CONTENT: Many of the homework and home project assignments ask students to use analysis tools to assess the impact of different design parameters on overall performance. In lab, the availability of several methods of achieving experimental goals, troubleshooting faulty equipment and the fact that any method employed will be in error due to assumptions and approximations when modeling system behavior, means that there is no single correct answer to the problem and not a single correct way of doing it.	 FERMS OFFERED: Fall, Spring, and Summer PRE-REQUISITIES: ME 274 Basic Mechanics II AA 262 Linear Algebra and Differential Equations E 201 Linear Circuit Analysis E 207 Electric Measurement Techniques COURSE OUTCOMES [Related ME Program Outcomes in rackets]: 1. Provide a <i>fundamental knowledge</i> of systems, measurements and control. [1, 2] 2. Provide an introduction to the concept of <i>feedback control</i>. [1, 2] 3. Gain knowledge of the practice and art of modeling, measurements and control through laboratory experiments. [1, 2, 4, 7] 4. Provide hands-on experiences with take-home projects and inlab experiments [3, 5, 6] 5. Sharpen technical communication skills. [3, 5]

[1, 2, 4, 7] Provide hands-on experiences with take-home projects and inlab experiments [3, 5, 6]
 Engineering Topics: Engineering Science – 2.5 credits (83.3%) Engineering Design – 0.5 credits (16.7%) COMPUTER USAGE: Students are expected to use portable microcontroller boxes (such as NI myRIO) for some of the homework assignments (home projects). LabVIEW programming is used in both Laboratory and Home Projects. Students use "ready-made" analysis modules in MATLAB and LabVIEW, in addition to writing their own special-purpose programs (virtual instruments in LabVIEW) to simulate, acquire and analyze data. Programming assistance is provided in Laboratory and online. COURSE STRUCTURE/SCHEDULE: Lecture - 2 days per week and 3 times per week on alternative weeks, 50 minutes each. 	 Straper technical communication skins. [3, 5] RELATED ME PROGRAM OUTCOMES: Engineering fundamentals Engineering design Communication skills Ethical/Prof. responsibilities Teamwork skills Experimental skills Knowledge acquisition
