The privilege of operating the 3T MRI is granted by the Purdue MRI Facility on the condition that the approved individual adheres to the rules and guidelines at all times. Violations of Purdue MRI Facility rules and guidelines may result in revocation of the previously “Scanning Approved” rights at any time prior to the annual re-approval process.

Violations that may, at the discretion of the Purdue MRI Facility, lead to revocation of “Scanning Approved” status include but are not limited to:

- Injury or illness (of any nature) to a subject or experiment participant that may be associated with the magnetic environment
- Failure to report safety-related incidents involving subjects or experiment participants, independent of occurrence of an injury
- Failure to provide proper documentation regarding an imaging session (e.g., screening forms, consent forms, Nominal Configuration Checklist)
- Failure to return the MRI Facility to its nominal configuration
- Failure to report malfunctions of hardware that may affect other imaging sessions (e.g., MRI TPS requires reset, audio-visual presentation system failure, etc.)
- Failure to report malfunctions of software that may affect other imaging sessions
- Failure to follow standard operating procedures for reporting incidents, malfunctions, or patient injuries or abnormalities

If a question arises as to whether an incident is to be reported, please contact the Manager of Operations or a Facility Co-Director.
