

# Where Do We Go From Here?

Andrew J. Whelton, Ph.D.  
Civil, Environmental, and  
Ecological Engineering

# Stagnation *noun*

stag·na·tion | \ stag-'nā-shən

a state or condition marked by  
lack of flow, movement

When water does not flow  
well; areas of stagnant water  
encourage biofilm growth  
and reduce temperature and  
level of disinfectant

U.S. National Science Foundation RAPID Award 2027049

# Shutdowns and Consequences - Extreme Plumbing Stagnation and Recommissioning

1. Support to the plumbing and public health sectors on building water safety guidance and decisions, *ongoing*
2. Building water safety review due to prolonged stagnation with experts from 8 private and public sector organizations, *ongoing*
3. Field testing to determine how impacted building water safety is in actual large buildings, *ongoing*
4. Lab testing to determine how to fully recover contaminated building water system devices and equipment, *planned*
5. Help transform public awareness, *ongoing*

Helping

SAFE WATER ENGINEERING

# #2. Building water safety review due to prolonged stagnation with experts from 7 private and public sector organizations

## Collaborative effort

# Available information only pertains to less than 2 weeks of stagnation or low water use

- **Copper** can leach
  - Nausea, vomiting, diarrhea, abdominal cramps
- **Lead** can leach
  - Nausea, vomiting, diarrhea, abdominal cramps, longer-term developmental issues with children
- **Scale** can be suspended
- **Harmful organisms** (e.g., *Legionella pneumophila* and other opportunistic pathogens) can grow - better
  - Many organisms cause respiratory illness, and other infections can occur

*Exposure Routes of Concern: Ingestion, Dermal, Inhalation*

**Ensuring Water Quality in Building Premise Plumbing**

**ESSENTIAL FOR BUILDING OWNERS AND MANAGERS DURING AND AFTER COVID-19**

Ensuring water quality in building premise plumbing is a critical component of a building's overall health and safety. This document provides guidance for building owners and managers on how to ensure water quality in building premise plumbing during and after the COVID-19 pandemic.

**Key points include:**

- Understanding the importance of water quality in building premise plumbing.
- Identifying potential sources of contamination and how to prevent them.
- Implementing measures to ensure water quality in building premise plumbing.
- Monitoring water quality in building premise plumbing.
- Responding to water quality issues in building premise plumbing.

**Control of Legionella Bacteria During and After the COVID-19 Pandemic**

**Advice**

Legionella bacteria can cause Legionnaires' disease, a serious illness that can be fatal. This document provides guidance for building owners and managers on how to control Legionella bacteria during and after the COVID-19 pandemic.

**Key points include:**

- Understanding the risks of Legionella bacteria in building premise plumbing.
- Implementing measures to control Legionella bacteria in building premise plumbing.
- Monitoring Legionella bacteria in building premise plumbing.
- Responding to Legionella bacteria in building premise plumbing.

**COVID-19 Guidance for Legionella and Building Water System Closures**

This document provides guidance for building owners and managers on how to manage Legionella and building water system closures during and after the COVID-19 pandemic.

**Key points include:**

- Understanding the risks of Legionella in building premise plumbing.
- Implementing measures to manage Legionella and building water system closures.
- Monitoring Legionella in building premise plumbing.
- Responding to Legionella in building premise plumbing.

**COVID-19 Guidance for Building Water System Closures**

This document provides guidance for building owners and managers on how to manage building water system closures during and after the COVID-19 pandemic.

**Key points include:**

- Understanding the risks of building water system closures.
- Implementing measures to manage building water system closures.
- Monitoring building water system closures.
- Responding to building water system closures.

**Public Health England**

**Water Quality and Your Business: Tips for Re-opening After Closures**

This document provides guidance for building owners and managers on how to manage water quality in building premise plumbing during and after the COVID-19 pandemic.

**Key points include:**

- Understanding the risks of water quality in building premise plumbing.
- Implementing measures to manage water quality in building premise plumbing.
- Monitoring water quality in building premise plumbing.
- Responding to water quality in building premise plumbing.

**Public Services and Procurement Canada (PSPC)**

**Building Water Systems Minimum Requirements – (COVID-19)**

This document provides guidance for building owners and managers on how to manage building water systems during and after the COVID-19 pandemic.

**Key points include:**

- Understanding the risks of building water systems.
- Implementing measures to manage building water systems.
- Monitoring building water systems.
- Responding to building water systems.

**Building Water Quality and Coronavirus: Flushing Guidance for Periods of Low or No Use**

This document provides guidance for building owners and managers on how to manage building water quality during and after the COVID-19 pandemic.

**Key points include:**

- Understanding the risks of building water quality.
- Implementing measures to manage building water quality.
- Monitoring building water quality.
- Responding to building water quality.

**Safe Management of Water Systems in Buildings During the COVID-19 Outbreak**

This document provides guidance for building owners and managers on how to manage water systems in buildings during the COVID-19 outbreak.

**Key points include:**

- Understanding the risks of water systems in buildings.
- Implementing measures to manage water systems in buildings.
- Monitoring water systems in buildings.
- Responding to water systems in buildings.

**Guidelines for Premise Plumbing Water Service Restoration**

This document provides guidance for building owners and managers on how to manage premise plumbing water service restoration during and after the COVID-19 pandemic.

**Key points include:**

- Understanding the risks of premise plumbing water service restoration.
- Implementing measures to manage premise plumbing water service restoration.
- Monitoring premise plumbing water service restoration.
- Responding to premise plumbing water service restoration.

**Flushing Guidance for Buildings with Low Occupancy or No Occupancy During COVID-19**

This document provides guidance for building owners and managers on how to manage flushing in buildings with low occupancy or no occupancy during the COVID-19 pandemic.

**Key points include:**

- Understanding the risks of flushing in buildings with low occupancy or no occupancy.
- Implementing measures to manage flushing in buildings with low occupancy or no occupancy.
- Monitoring flushing in buildings with low occupancy or no occupancy.
- Responding to flushing in buildings with low occupancy or no occupancy.

**SAFELY RE-OPENING BUILDINGS a FACT SHEET for Building Owners/Operators**

This document provides guidance for building owners and operators on how to safely re-open buildings during and after the COVID-19 pandemic.

**Key points include:**

- Understanding the risks of re-opening buildings.
- Implementing measures to safely re-open buildings.
- Monitoring re-opening buildings.
- Responding to re-opening buildings.

Since March 2020, there have been more than **45+** guidance documents telling building owners what they could do to prevent and deal with stagnation situations.

Many differ quite dramatically. Some lack key info (safety, devices, sensitive populations, etc.).

**Building Water System Return to Service Guidance**

This document provides guidance for building owners and managers on how to manage building water systems during and after the COVID-19 pandemic.

**Key points include:**

- Understanding the risks of building water systems.
- Implementing measures to manage building water systems.
- Monitoring building water systems.
- Responding to building water systems.

**Ensuring the Safety of Your Building Water System Post COVID-19 Pandemic**

This document provides guidance for building owners and managers on how to ensure the safety of building water systems post-COVID-19 pandemic.

**Key points include:**

- Understanding the risks of building water systems post-COVID-19 pandemic.
- Implementing measures to ensure the safety of building water systems post-COVID-19 pandemic.
- Monitoring building water systems post-COVID-19 pandemic.
- Responding to building water systems post-COVID-19 pandemic.

**Has Your Facility Been Closed for Weeks? Flush the Pipes.**

This document provides guidance for building owners and managers on how to flush pipes in facilities that have been closed for weeks.

**Key points include:**

- Understanding the risks of flushing pipes in facilities that have been closed for weeks.
- Implementing measures to flush pipes in facilities that have been closed for weeks.
- Monitoring flushing pipes in facilities that have been closed for weeks.
- Responding to flushing pipes in facilities that have been closed for weeks.

**Water Quality and Your Business: Tips for Re-opening After Closures**

This document provides guidance for building owners and managers on how to manage water quality in building premise plumbing during and after the COVID-19 pandemic.

**Key points include:**

- Understanding the risks of water quality in building premise plumbing.
- Implementing measures to manage water quality in building premise plumbing.
- Monitoring water quality in building premise plumbing.
- Responding to water quality in building premise plumbing.

**ICDM Guidance for Flushing Water Systems During Water Closures**

This document provides guidance for building owners and managers on how to manage flushing water systems during water closures.

**Key points include:**

- Understanding the risks of flushing water systems during water closures.
- Implementing measures to manage flushing water systems during water closures.
- Monitoring flushing water systems during water closures.
- Responding to flushing water systems during water closures.

**MAINTAINING OR RESTORING WATER QUALITY IN BUILDINGS WITH LOW OR NO USE**

This document provides guidance for building owners and managers on how to maintain or restore water quality in buildings with low or no use.

**Key points include:**

- Understanding the risks of maintaining or restoring water quality in buildings with low or no use.
- Implementing measures to maintain or restore water quality in buildings with low or no use.
- Monitoring maintaining or restoring water quality in buildings with low or no use.
- Responding to maintaining or restoring water quality in buildings with low or no use.

**Building Water System Startup Checklist**

This document provides guidance for building owners and managers on how to manage building water system startup.

**Key points include:**

- Understanding the risks of building water system startup.
- Implementing measures to manage building water system startup.
- Monitoring building water system startup.
- Responding to building water system startup.

**Water Quality Recommendations for Opening Class 1 and 2 Frequently Used Buildings**

This document provides guidance for building owners and managers on how to manage water quality in opening Class 1 and 2 frequently used buildings.

**Key points include:**

- Understanding the risks of water quality in opening Class 1 and 2 frequently used buildings.
- Implementing measures to manage water quality in opening Class 1 and 2 frequently used buildings.
- Monitoring water quality in opening Class 1 and 2 frequently used buildings.
- Responding to water quality in opening Class 1 and 2 frequently used buildings.

**Water Quality Recommendations for Opening Class 1 and 2 Frequently Used Buildings**

This document provides guidance for building owners and managers on how to manage water quality in opening Class 1 and 2 frequently used buildings.

**Key points include:**

- Understanding the risks of water quality in opening Class 1 and 2 frequently used buildings.
- Implementing measures to manage water quality in opening Class 1 and 2 frequently used buildings.
- Monitoring water quality in opening Class 1 and 2 frequently used buildings.
- Responding to water quality in opening Class 1 and 2 frequently used buildings.

# Why are they so different?

- Different perspectives - *sides of the elephant*
- Guidance targeted for different readers
- Different starting info. about water safety & plumbing
- Prescriptive step-by-step documents vs. general advice
- Some are derivatives of others, and others...and others!
- Some have been revised (version 3 since March 2020)
- Media, water utilities, and associations issuing very brief messages

***Awareness vs. Informational vs. Warnings vs. Actions***

**How will we know if by  
following guidance  
documents we *avoid* or  
*cause* waterborne  
illness?**

## Water Supplier

- Review water meter records
- Relentlessly educate customers
- Temporarily expand disinfectant residual testing and flushing
- Temporarily increase disinfectant level

## Health Department

- Relentlessly educate building owners
- Temporarily require water use and action reporting to maintain cert. of occupancy
- Directly advise building owners
- Pay attention to sensitive populations
- Notify laboratories about water testing

## Building Owner (may or may not know water)

- Contact the health department (EH) for guidance
- Contact the water supplier about the incoming water
- Keep water fresh, clean plumbing, don't allow prolonged stagnation
- Test temperature and disinfectant levels
- Create and maintain water use, flushing, and testing records
- Contact external experts for help

# Conclusions

1. Low water use and stagnation poses serious health risks. Keep water fresh.
2. Much of the building water system guidance issued since the pandemic is projected from short-term stagnation studies. Best to review multiple documents, not 1 as many omit key information.
3. The only way to know if guidance works is to test.
4. Reach out to us if you have questions or need help.

Thank you for visiting. This website is designed to provide information to persons who drink water in buildings, as well as building construction, plumbing, water utility, education, and public health sectors. Together, we are working to understand how to make certain the water you use at home, at work, and at schools is safe. Please contact us if you have any questions at [awhelton@purdue.edu](mailto:awhelton@purdue.edu).

# Extra Slides

# How could we *prevent* water quality problems?

## Keep the water moving! $\neq$ stagnation

- Source water must be fresh (utility, onsite well, Source may need to flush!)
- Clean devices and equipment
- Flushing – Keep water fresh
- Water heater and recirculation loops – Keep hot water hot, Keep cold water cold

*Our YouTube Channel* ➔

## *Flushing Plans*

# What actions can be taken to *deal with* water quality deterioration?

- Recommissioning plumbing
  - System integrity checks
  - Flushing (and cleaning)
  - Shock disinfection
  - Testing
- Professional help might be needed
  - Address complex mechanical and treatment equipment
  - Develop effective flushing plans
  - Perform shock disinfection safely (thermal or chemical)
  - Perform accurate testing

# Flushing and More Intensive System Cleaning Could Make People Sick

## Engineering Controls

- Fill sink and floor drains traps with water
- Maintain pressure when flushing
- During flushing (especially initial), many methods to reduce exposure: Cover toilets, showerheads, faucets, reduce splashing, use hoses
- Flooding, cross-connections, dealing with waste

## Administrative and Work Practice Controls

- Temporarily forbidding use of high-risk exposure items (showers, hot tubs, decorative fountains)
- Temporarily closing facilities to concentrate use

## Personal Protective Equipment (PPE)

- Protect against scalding
- Protect against chemical exposure
- OSHA and other agencies recommend respirators *if Legionella is suspected or possible*

N95 respirators, but recommends voluntary use of N100 “if *Legionella* contamination is possible”

P100 HEPA filter respirators when sampling building water and *Legionella* may be present

# The FUTURE? Predict water quality at the tap

Ongoing  
Residential  
Home Study  
Funded by  
EPA

# Documents to consider to DEVELOP guidance
