

MOVING TO A WORLD BEYOND

$p < 0.05$

24 JAN
3–5PM

Dr. Ronald L. Wasserstein
Executive Director
American Statistical Association

For nearly a hundred years the concept of **“statistical significance”** has been fundamental to statistics and to science. And for nearly that long, it has been controversial and misused as well. In a completely non-technical (and generally humorous) way,

ASA Executive Director Ron Wasserstein will explain this controversy, and say **why he and others have called for an end to the use of statistical significance** as a means of determining the worth of scientific results.

He will talk about why this change is so **hard for the scientific community** to make, but why it is **good for science** and for statistics.

Fri JAN 24 3–5PM **Fowler Hall**

3–4PM

Wasserstein Talk

4–5PM
