INTRODUCTION TO ANALYZING VIDEO FROM THE C-SPAN ARCHIVES

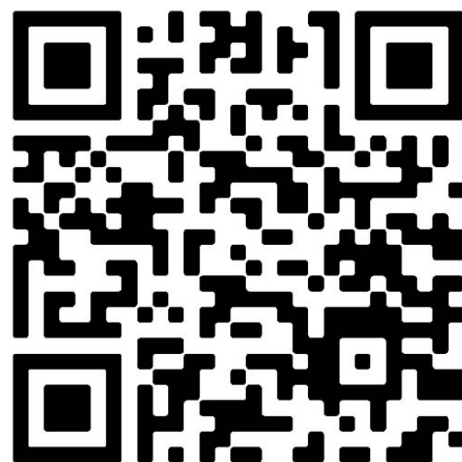

Professor Bryce Dietrich of the University of Iowa will demonstrate the use of novel quantitative, automated, and machine learning methods to analyze non-traditional data sources such as audio and video data. He uses these to understand the causes and consequences of non-verbal political behavior.

This workshop will show participants how to use some of the methods he has developed to analyze videos found in the C-SPAN Video Library. In particular, he will introduce participants to basic pedestrian tracking, as well as methods for multimodal classification which are especially useful when analyzing videos.
