

The Department of Forestry and Natural Resources presents:

Moving Forward in Lake Erie: From HABs to HAB Nots

In 2014 the City of Toledo issued a "do not drink" advisory when toxin concentrations at the Lake Erie water intake exceeded recommended safety levels. The "Toledo incident" was just one symptom of the excessive algal growth that has been plaguing Lake Erie with increasing frequency since the early 2000s. In 2012 Canada and the United States updated the Great Lakes Water Quality Agreement with commitments to control these resurgent harmful algal blooms (HABs). In this presentation we look back at management efforts to reduce HABs in the 1970s-80s for lessons on how best to move forward under the updated Agreement.

FNR

GRADUATE
SEMINAR
SERIES

Join us for a lecture and conversation with
Dr. Craig Stow

TUESDAY
April 17, 2018
3:30PM

FNR 67900
SPRING 2018

Everyone is welcome to attend. This series aims to stimulate discussion and create opportunities for collaborations.

Craig Stow

Aquatic Ecosystem Modeling
NOAA Great Lakes Environmental Research Laboratory

If you are interested in meeting with Dr. Stow,
please contact Dr. Tomas Hook at thook@purdue.edu.
