

The Purdue Institute of Inflammation, Immunology and Infectious Disease Presents:

Mapping the Brain (and my way in Science)

THE PURDUE LECTURE HALL SERIES

Thursday, November 29th, 2018 @ 7pm

Purdue University, LYNN 1136

(625 Harrison St, West Lafayette, IN 47907)

Guest Speaker: **Qiuyu (Rachel) Wu,**

PhD candidate, Department of Biological Sciences

Growing up in an academic family in China, Rachel always loved science. However, her journey from a youth science academy leader to a PhD neuroscientist isn't a straight route, during which she encountered research in plant germination, liver cancer, early life stress and brain development, and so on. Her current research combines technology development and electrophysiology to study the dynamic of brain circuit connection during learning, both in healthy and diseased conditions, and provide information for brain repair therapy.
