

Mechanically Pumped Loop for Spacecraft Thermal Management

Robert Gerace, Clive Gierbolini, Dan Griffith, Jake Overton, John Pardekooper

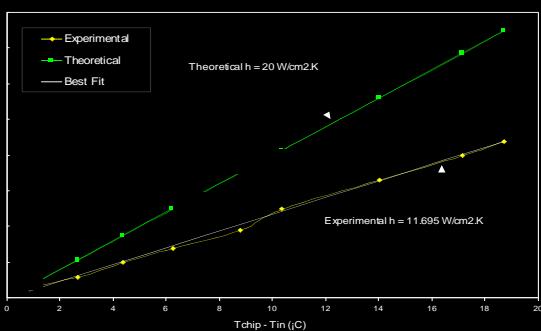

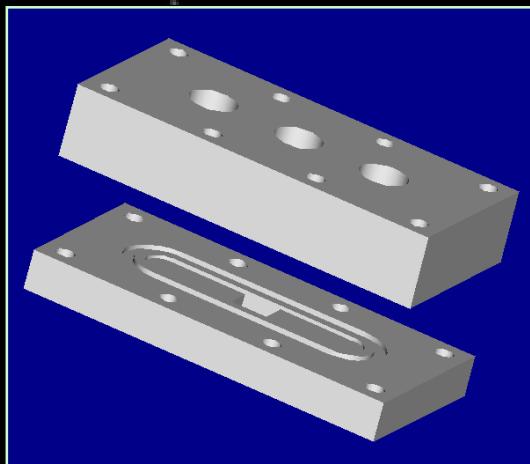

Objectives:

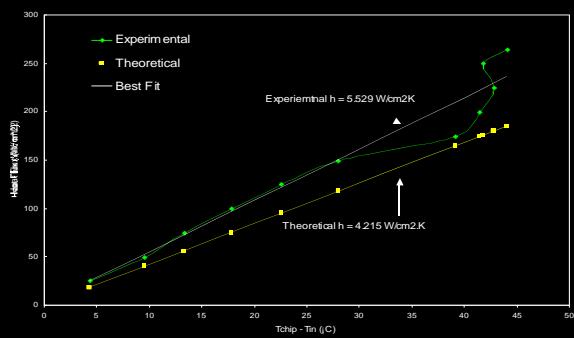

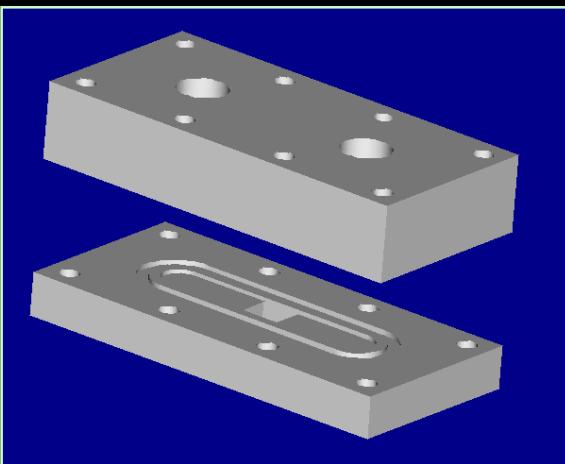

- Develop a pumped cooling loop capable of dissipating high heat fluxes from an electronic source in spacecraft.
- Explore boiler designs utilizing jet impingement and micro-channel cooling
- Minimize size and weight of all loop components.

Jet Impingement Boiler Design

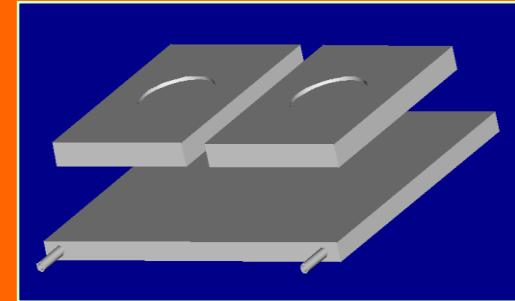

Micro-channel Boiler Design

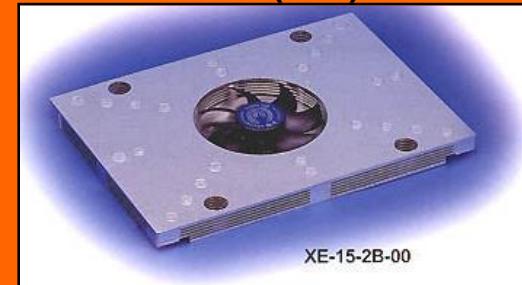

Key Findings:

- Micro-channel flow case: chip temperature maintained at 113° C while dissipating 265 W/cm² without incurring critical heat flux.
- Jet impingement case: chip temperature maintained at 80° C while dissipating 220 W/cm² without incurring critical heat flux.

Cold Plate & Fans

Fan (2 of)

- Possess lateral fins
- 12 V / 0.22 Amps
- 20 CFM air flow

Gear Pump

- Max pressure of 23 psi
- 1.75" x 2.5" x 4"
- 0.63 lbs
- 12 V / 2.2 Amps
