

United States Department of Agriculture National Institute of Food and Agriculture

This research is part of a regional collaborative project supported by the USDA-NIFA, Award No. 2011-68002-30190: Cropping Systems Coordinated Agricultural Project: Climate Change, Mitigation, and Adaptation in Corn-based Cropping Systems

Cover crops to improve resilience?

- A living, growing plant at times of year when we normally have nothing growing.
- Capture sunlight, feed soil organisms, sequester carbon, trap and recycle nutrients, improve soil quality
- Make better use of the resources and time available!

What is (or would be) **YOUR** main purpose for growing cover crops?

- a. Reduce erosion
- b. Scavenge residual N
- c. Produce (fix) N
- d. Build soil health
- e. Control weeds

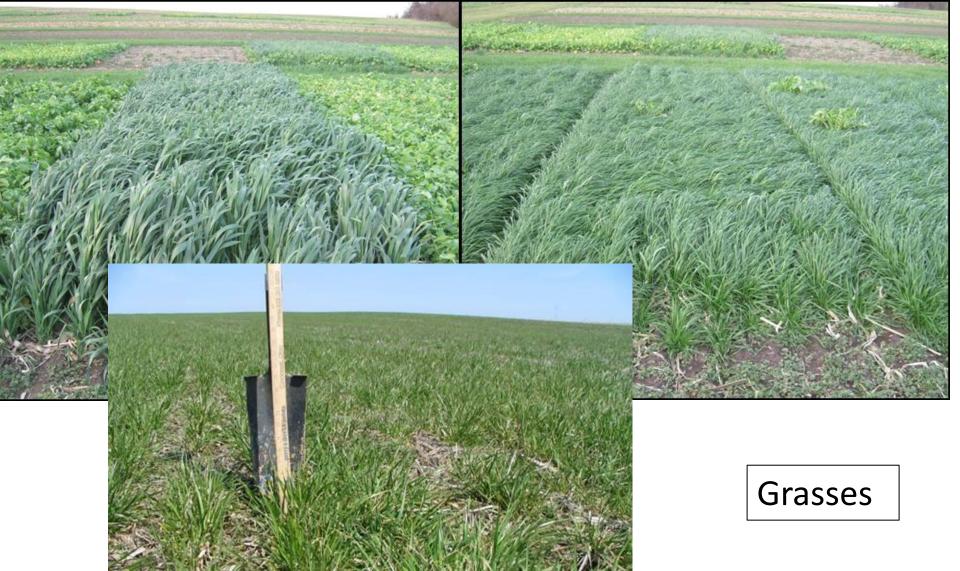

So, choose your cover crop to meet your main purposes (no one cover crop does everything!)

 Oh, there are so many interesting cover crops to choose from! Where do I start?

Brassicas

Why is the Sustainable Corn Team using <u>cereal rye</u> as the cover crop?

- a. Most winter hardy
- b. Most widely adaptable
- c. No management challenges
- d. Didn't know how to grow anything else
- e. Wanted to make good bread from product

Why is the Sustainable Corn Team using <u>cereal rye</u> as the cover crop?

- a. Most winter hardy-- YES
- b. Most widely adaptable--YES
- c. No management challenges-- NO!!
- d. Didn't know how to grow anything else
- e. Wanted to make good bread from product

What is (or would be) **YOUR** main purpose for growing cover crops?

Rye

a. Reduce erosion **Excellent**

b. Scavenge residual N Excellent

c. Produce (fix) N

d. Build soil health **Excellent**

e. Control weeds Excellent

Cover crops are part of a system!

- Different potential benefits and challenges for each type of cover crop
- Must adapt cropping <u>system</u>, including nutrient mgmt, NT/tillage system, manure, pest mgmt, crop rotation
- Learning curve— need to do homework!

First challenge— getting cover crops to grow!

 Reliable establishment, and adequate growth, often cited as challenges

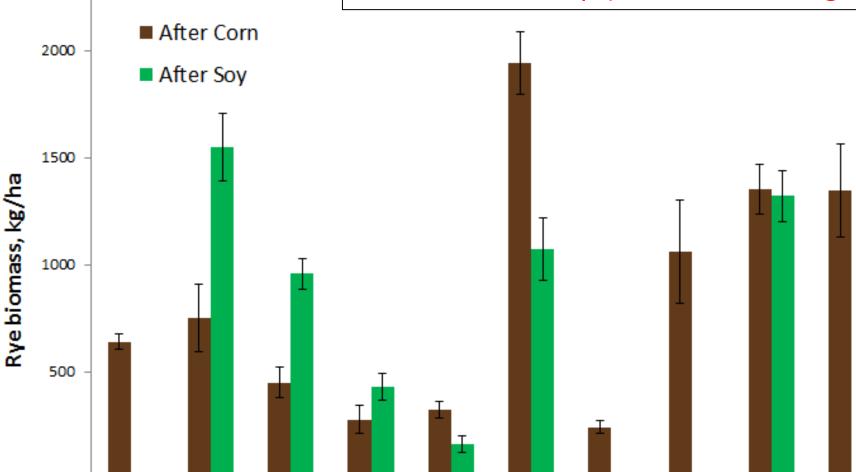

Rye growth

²⁵⁰⁰ Spring 2012

Varies:

- Across region
- Across cash crop (time allowed to grow)

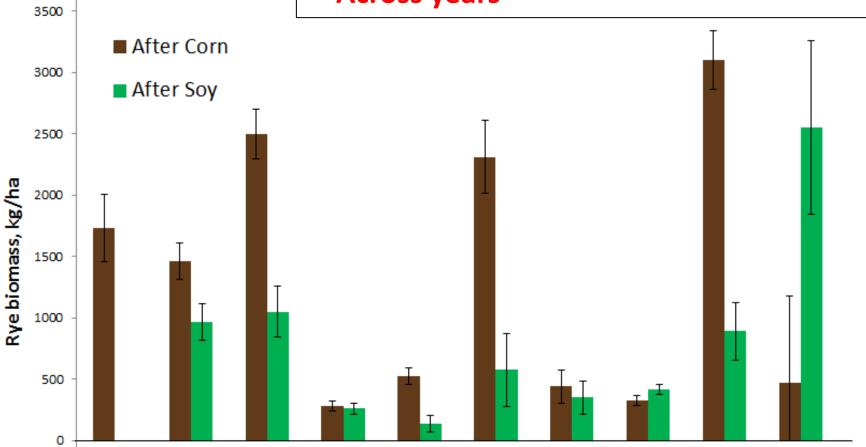

Rye growth

Varies:

- Across region
- Across cash crop (time allowed to grow)
- Across years

For larger adoption in Midwest,....

- Need to further develop ways to:
 - Improve reliability of establishment
 - Get more growth (Roots? Shoots?)
 - Manage the system to reduce risks
- Different seeding methods and timings, as discussed at Field Day this morning, are part of that effort by many folks in region

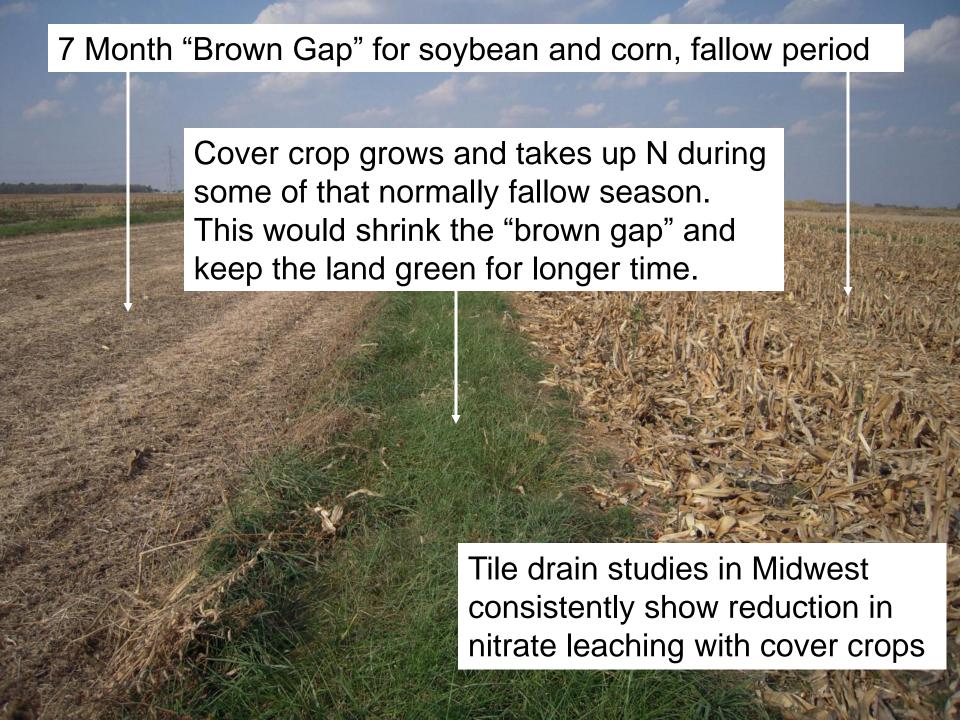

How do covers increase resilience?

- Water quality- reduce nitrate leaching
 - ➤ Off-site. Short-term (ie, NOW) (see magazine)

How do covers increase resilience?

- Water quality- reduce nitrate leaching
 - ➤ Off-site. Short-term (ie, NOW) (see magazine)
- Build soil organic matter
 - Long-term. Many benefits of SOM to productivity. (see magazine)
- Scavenge N that would otherwise be lost
 - ➤ Long-term. Goes into <u>YOUR</u> soil bank acct.
- Reduce erosion
 - ➤ Long-term. Keeps your expensive soil on YOUR farm.

Risks / Benefits

- Mulch (see magazine)
 - Risk
 if too much mulch and season very wet
 - Benefit- more water available in dry season
- Pest management—weeds, insects, diseases may be different- need diff mgmt.
- Crop yield (see magazine)
 - Short-term may not show increase, and sometimes decrease (rye esp.)
 - Long-term investment- yield and yield stability

How select cover crops?

- What is your main purpose?
- What is your cropping / tillage system?
 - Current cash crop and next cash crop?
 - No-till, strip till, or other systems?
- What time windows are available?
- How will you seed the cover crop?
- Soil types, climate, drought, manure, herbicide carryover, other local issues?

Illinois

Indiana

Iowa

Michigan Minnesota Missouri North Dakota Ohio Wisconsin Ontario

WHAT ARE COVER CROPS?

Cover crops are plants seeded into agricultural fields, either within or outside of the regular growing season, with the primary purpose of improving or maintaining ecosystem quality.

The goal of the Midwest Cover Crops Council (MCCC) is to facilitate widespread adoption of cover crops throughout the Midwest, to improve ecological, economic, and social sustainability.

WHAT DO COVER CROPS DO FOR THE ENVIRONMENT?

- Enhance biodiversity
- Increase soil infiltration, leading to less flooding,

Selector Tools

Attract noney pees and peneficial insects

Bottom line— Cover crops....

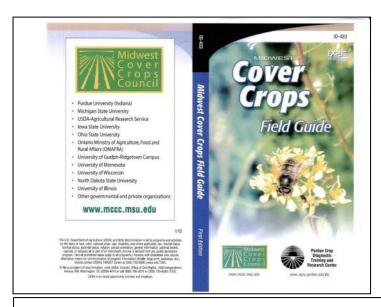

- May increase resilience, esp. long-term
- Pose some challenges/risks
 - Learning curve
 - Greater management needed
- Provide water quality benefits downstream
- More research needed to realize the full potential of cover crops in Midwest

Cover Crop Selector Tools

bar)

How likely are you to pursue more information about cover crops, for possible inclusion in your watershed?

- a. Very likely
- b. Somewhat likely
- c. Not likely at all
- d. Not applicable (I don't work with a watershed, nor do I farm)
