

Cone flying from left to right in a ballistics range at Mach 4.42. Shows laminar and turbulent regions on the cone. This is a viewgraph loaned by Ken Stetson 27 Feb. 2004 to S.P. Schneider. Paper edges say "Isolated Burst" "Stetson" "Shot 6727 10H", and also "Reda", crossed out. Appears to be the viewgraph shipped by Dan Reda to Ken along with the two photos scanned earlier. Appears to be an enlarged image of one of the spots from the photo of shot 6727 (for details, see Table 1 in NSWC-TR-77-59). Confirms earlier understanding that the two shots in the photo are Dan's. Scanned to 2400 dpi and downsampled to 600 dpi for this image.
