

Exam No. 1

Student Name: AMIT VARMA

Student ID: _____

Points scored:

Question 1 = _____

Question 2 = _____

Question 3 = _____

Question 4 = _____

Question 5 = _____

Total = _____

P.S. The exam is closed book and closed notes. You will not need to reference anything. Please do not exchange information or answers with any student. Any form of cheating or copying will result in expulsion from the exam hall.

Question 1.

(10 points)

Classify each of the structures as statically determinate, indeterminate, or unstable. State your reasoning clearly. If indeterminate, specify the degree of indeterminacy.

(a)

$$r = 12$$

$$n = 3$$

$$r > 3n$$

$$\therefore r - 3n = 8$$

INDETERMINATE TO 8°

(b)

$$r = 8$$

$$n = 2$$

$$r > 3n$$

$$r - 3n = 9$$

INDETERMINATE TO 9°

(a)

$$r = 9 \quad n = 3 \quad \therefore r = 3n$$

DETERMINATE & STABLE

(b)

$$r = 4$$

$$n = 4$$

$$r = 3n$$

DETERMINATE & STABLE

UNSTABLE
reactions are parallel

Question 2

(10 points)

Classify the truss as simple, compound, or complex. Determine if it is determinate, indeterminate, or stable. If it is indeterminate, state external or internal indeterminacy and to what degree.

(a)

UNSTABLE
TRIANGULATION INCOMPLETE

(b)

$$\left. \begin{array}{l} b = 9 \\ r = 3 \\ j = 6 \end{array} \right\} \begin{array}{l} b + r = 2j \\ \text{determinate} \\ \text{COMPLEX} \end{array}$$

(c)

$$\left. \begin{array}{l} b = 15 \\ r = 3 \\ j = 10 \end{array} \right\} \begin{array}{l} b + r < 2j \\ \text{UNSTABLE} \end{array}$$

(a)

COMPOUND TYPE 3

$$\left. \begin{array}{l} b = 19 \\ r = 3 \\ j = 11 \end{array} \right\} \begin{array}{l} b + r = 2j \\ \text{determinate} \\ \text{STABLE} \end{array}$$

COMPOUND TYPE 2

UNSTABLE

Question 3.

(20 points)

For the structure shown below, determine the tension in the cable and the horizontal and vertical reactions at C. Note that the tension in a cable is always constant (on either side of a frictionless pulley).

$$\rightarrow \sum F_x = 0 \quad \therefore 0.5T + C_x = 0$$

$$+\uparrow \sum F_y = 0 \quad \therefore 0.866T + T + C_y - 40 = 0$$

$$\begin{aligned} (+ \sum M_c = 0 \quad \therefore -2T - 5(0.866T) \\ + 40 \times 2.5 = 0 \end{aligned}$$

$$\therefore T = \frac{100}{6.33} = 15.8 \text{ kN}$$

$$C_x = -7.9 \text{ kN}$$

$$C_y = 40 - 1.866T$$

$$C_y = 10.5172 \text{ kN}$$

5 Points FBD

3 x 3 Point Equations

2 x 3 Final Answers

5 Points 1st FBD
 2 x 3 Points Equations
 1 x 3 Reactions
 2 FEF

16 points
 Question 4

5 points 2nd FBD
 2 x 3 point equation
 1 x 3 points Forces

14 points

(30 points)

Calculate the reactions at D and E for the truss. Using the method of joints, calculate the force in member EF. Using the method of sections calculate the force in members GF, GC, and BC

$$\sum M_E = 0 \quad \therefore +12 \times 2.236 + 12 \times 2 \times 2.236 + 12 \times 3 \times 2.236 + 3D_x = 0$$

$$D_x = -53.665 \text{ kN}$$

$$\sum F_x = 0 \quad \therefore (5.364 \times 3) + D_x + 0.894 R_E = 0$$

$$R_E = 42.028 \text{ kN}$$

$$\sum F_y = 0 \quad \therefore -10.728 \times 3 + 0.447 \times 42.028 + D_y = 0$$

$$D_y = 13.4 \text{ kN}$$

$$F_{EF} = R_E = 42.028 \text{ kN (T)}$$

$$\sum M_G = 0$$

$$\therefore 12 \times 2.236 + F_{BC} \times 1 \text{ m} = 0$$

$$\therefore F_{BC} = -26.832 \text{ kN}$$

$$\sum F_x = 0 \quad \therefore 5.364 \times 2 + 0.894 (F_{GF} + F_{GC}) + F_{BC} = 0$$

$$\sum F_y = 0 \quad \therefore -10.728 - 10.728 + 0.447 (F_{GF} - F_{GC}) = 0$$

5 FBD x 3 = 15 points

A = N (2 x 1.5 points)

B = SFD (4 x 1.5 points)

C = BMD (4 x 1.5 points)

Question 5

(30 points)

Draw the axial force, shear force, and bending moment diagrams for each member of the frame shown. Assume joints B and C are fixed connected.

4:22
5:12
50 minutes
