

The figure was generated by Mr. Hanting Chiang in his HW5 solution for fall 2009.

Shannon

↓
This is what is asked in HW5

Shannon capacity with G_{sn} alphabet

$$\frac{1}{2} \log_2(1 + \text{SNR}) = \frac{1}{3} \text{ (bit/symbol)}$$

$$10 \log_{10}(\text{SNR}) \approx -2.31 \text{ dB}$$

Shannon capacity with antipodal input.

$$\text{SNR}^* \approx -2.2588 \text{ dB}$$
