Midterm #3 of ECE301, Section 2

8–9pm, Monday, April 6, 2015, EE 170.

- 1. Please make sure that it is your name printed on the exam booklet. Enter your student ID number, and signature in the space provided on this page, **NOW!**
- 2. This is a closed book exam.
- 3. This exam contains multiple choice questions and work-out questions. For multiple choice questions, there is no need to justify your answers. You have one hour to complete it. The students are suggested not spending too much time on a single question, and working on those that you know how to solve.
- 4. Use the back of each page for rough work.
- 5. Neither calculators nor help sheets are allowed.

Name:

Student ID:

I certify that I have neither given nor received unauthorized aid on this exam.

Signature:

Date:

Question 1: [28%, Work-out question, Learning Objectives 1, 2, 4, and 5] Consider a periodic discrete-time signal

$$x[n] = \begin{cases} \sin\left(\frac{\pi n}{4}\right) & \text{if } 0 \le n \le 3\\ \text{periodic with period } N = 4 \end{cases}.$$
 (1)

- 1. [3%] Plot x[n] for the range of $-6 \le n \le 6$.
- 2. [1%] Is the value x[n] < 0 for any n? (This is a yes/no question. No need to justify your answer).
- 3. [12%] Find the Fourier series representation (a_k, ω_0) of x[n].

Continue from the above questions. Consider a discrete-time LTI system with impulse response

$$h[n] = 10^{-|n|}.$$
 (2)

We use x[n] as the input to the above LTI system and denote the output by y[n].

- 4. [2%] Is y[n] periodic? If so, write down the period of y[n]. If not, explain why y[n] is not periodic by one sentence or two.
- 5. [10%] Express the Fourier series coefficient value b_3 of y[n] in terms of the (a_k, ω_0) computed in the previous questions.

Hint: You may need to use the summation formula:

$$\sum_{k=1}^{\infty} a r^{k-1} = \frac{a}{1-r} \quad \text{if } |r| < 1.$$
(3)

Question 2: [22%, Work-out question, Learning Objectives 1, 4, and 5]

Consider a continuous time signal

$$x(t) = \begin{cases} 1 & \text{if } -1 \le t \le 2\\ e^{-(t-2)} & \text{if } 2 < t\\ e^{1+t} & \text{if } t < -1 \end{cases}$$
(4)

- 1. [2%] Plot x(t) for the range of $-3 \le t \le 3$.
- 2. [10%] Find the Fourier transform $X(j\omega)$ of x(t). Hint: Tables 4.1 and 4.2 can be useful in this question.
- 3. [4%] Compute the value of $\int_{-\infty}^{\infty} X(j\omega) d\omega$.
- 4. [6%] Compute the value of $\int_{-\infty}^{\infty} |X(j\omega)|^2 d\omega$.

Question 3: [30%, Work-out question, Learning Objectives 1, 2, 3, 4, and 5] Consider a continuous-time LTI system with impulse response

$$h(t) = \frac{\sin(t)\sin(2t)}{t^2}.$$
(5)

1. [15%] Find the *frequency response* of the above system.

Let y(t) denote the output when the input is $x(t) = 2 + \cos(2t) + \sin(4t + 0.25\pi)$.

2. [15%] Find the Fourier transform $Y(j\omega)$ of y(t). Hint: If you do not know the answer to the previous question, you can assume that

$$H(j\omega) = e^{-2|\omega|-1}.$$
(6)

You will get full credit (15 points) if your answer is correct.

Question 4: [20%, Work-out question, Learning Objectives 3, 4, and 5] Consider a continuous time signal $x(t) = e^{-3t} \mathcal{U}(t)$. Let y(t) denote the output if we pass x(t) through an LTI system with impulse response $h(t) = e^{-(t-1)} \mathcal{U}(t-1)$. Find the expression of y(t).

Discrete-time Fourier series

$$x[n] = \sum_{k=\langle N \rangle} a_k e^{jk(2\pi/N)n} \tag{1}$$

$$a_k = \frac{1}{N} \sum_{n = \langle N \rangle} x[n] e^{-jk(2\pi/N)n}$$
⁽²⁾

Continuous-time Fourier series

$$x(t) = \sum_{k=-\infty}^{\infty} a_k e^{jk(2\pi/T)t}$$
(3)

$$a_k = \frac{1}{T} \int_T x(t) e^{-jk(2\pi/T)t} dt \tag{4}$$

Continuous-time Fourier transform

$$x(t) = \frac{1}{2\pi} \int_{-\infty}^{\infty} X(j\omega) e^{j\omega t} d\omega$$
⁽⁵⁾

$$X(j\omega) = \int_{-\infty}^{\infty} x(t)e^{-j\omega t}dt$$
(6)

Discrete-time Fourier transform

$$x[n] = \frac{1}{2\pi} \int_{2\pi} X(j\omega) e^{j\omega n} d\omega$$
⁽⁷⁾

$$X(e^{j\omega}) = \sum_{n=-\infty}^{\infty} x[n]e^{-j\omega n}$$
(8)

Laplace transform

$$x(t) = \frac{1}{2\pi} e^{\sigma t} \int_{-\infty}^{\infty} X(\sigma + j\omega) e^{j\omega t} d\omega$$
(9)

$$X(s) = \int_{-\infty}^{\infty} x(t)e^{-st}dt$$
(10)

Z transform

$$x[n] = r^{n} \mathcal{F}^{-1}(X(re^{j\omega})) \tag{11}$$

$$X(z) = \sum_{n=-\infty}^{\infty} x[n] z^{-n}$$
(12)

PROPERTIES OF CONTINUOUS-TIME FOURIER SERIES

three examples, we illustrate this. The last example in this section then demonstrates how properties of a signal can be used to characterize the signal in great detail.

Example 3.6

Consider the signal g(t) with a fundamental period of 4, shown in Figure 3.10 is could determine the Figure 3.10 is could determine the Fourier series representation of g(t) directly from the analysis control (2.30). Instead, when a function of g(t) directly from the analysis control (2.30). tion (3.39). Instead, we will use the relationship of g(t) to the symmetric periodic space wave r(t) in Example 3.5. Before to the wave x(t) in Example 3.5. Referring to that example, we see that, with T = 4 at $T_{1} = 1$ $T_1 = 1,$

g(t) = x(t-1) - 1/2.

Sec. 3.7 Properties of Discrete-Time Fourier Series

Thus, in general, *none* of the finite partial sums in eq. (3.52) yield the exact values of x(t), and convergence issues, such as those considered in Section 3.4, arise as we consider the problem of evaluating the limit as the number of terms approaches infinity.

221

3.7 PROPERTIES OF DISCRETE-TIME FOURIER SERIES

There are strong similarities between the properties of discrete-time and continuous-time Fourier series. This can be readily seen by comparing the discrete-time Fourier series properties summarized in Table 3.2 with their continuous-time counterparts in Table 3.1.

4.6 TABLES OF FOURIER PROPERTIES AND OF BASIC FOURIER TRANSFORM PAIRS

In the preceding sections and in the problems at the end of the chapter, we have considered some of the important properties of the Fourier transform. These are summarized in Table 4.1, in which we have also indicated the section of this chapter in which each property has been discussed.

In Table 4.2, we have assembled a list of many of the basic and important Fourier transform pairs. We will encounter many of these repeatedly as we apply the tools of

a duality relationship between the discrete-time Fourier transform and the continuous-time Fourier series. This relation is discussed in Section 5.7.2.

5.7.1 Duality in the Discrete-Time Fourier Series

Since the Fourier series coefficients a_k of a periodic signal x[n] are themselves a periodic sequence, we can expand the sequence a_k in a Fourier series. The duality property for discrete-time Fourier series implies that the Fourier series coefficients for the periodic sequence a_k are the values of (1/N)x[-n] (i.e., are proportional to the values of the original
