

Comments on Assignment #5

- 1) Explain why you are investigating nesting structures. (IIA assumptions)
- 2) What is the logic behind the nest? Why do you think there are unobserved effects between freeway & arterial, arterial & rural, and/or freeway & rural?
- 3) Please review hypothesis testing. Determine your null and alternative hypothesis. When you determine the confidence, you are that confident you can reject the null and accept the alternative. Therefore in this assignment if you found a 76% confidence for the logsum, you are 76% confident that you can reject the null (the logsum = 1) and accept the alternative (logsum is not equal to 1).
