ECE600 Random Variables and Waveforms Spring 2025

Homework Assignment #6

Sould be completed by Session 19

Reading Assignment: Read Sections 5-4, 5-5, and 6-1 through 6-3 of Papoulis.

- 1. (Papoulis 5-22) (a) Show that if $\mathbf{Y} = a\mathbf{X} + b$, then $\sigma_{\mathbf{Y}} = |a|\sigma_{\mathbf{X}}$; (b) If $\mathbf{Y} = (\mathbf{X} \eta_{\mathbf{X}})/\sigma_{\mathbf{X}}$, find $\eta_{\mathbf{Y}}$ and $\sigma_{\mathbf{Y}}$.(n.b. Here the symbol η refers to the mean and σ refers to the standard deviation.)
- 2. (Papoulis 5-23) Show that if **X** has a Rayleigh density with parameter α , such that

$$f_{\mathbf{X}}(x) = \frac{x}{\alpha^2} e^{-x^2/2\alpha^2} \cdot 1_{[0,\infty)}(x),$$

and $\mathbf{Y} = b + c\mathbf{X}^2$, that $\sigma_{\mathbf{Y}}^2 = 4c^2\alpha^4$.

3. (Papoulis 5-33) Showe that if **X** is a Gaussian random variable with mean η_x and variance σ^2 , then

$$E[|\mathbf{X}|] = \sigma \sqrt{\frac{2}{\pi}} \cdot e^{-\eta_x^2/2\sigma^2} + 2\eta_x \Phi\left(\frac{\eta_x}{\sigma}\right) - \eta_x.$$

4. (Papoulis 5-27) Given a probability space (S, \mathcal{F}, P) and a partition $\{A_1, A_2, \dots, A_n\}$ of S, show that

$$E[\mathbf{X}] = E[\mathbf{X}|A_1]P(A_1) + E[\mathbf{X}|A_2]P(A_2) + \dots + E[\mathbf{X}|A_n]P(A_n).$$

5. Let X be a binomially distributed random variable with

$$P({\mathbf{X} = k}) = \binom{n}{k} p^k (1-p)^{n-k}, \quad k = 0, 1, ..., n.$$

Find the mean and variance of X.

6. A Gamma distributed random variable \mathbf{X} has pdf

$$f_X(x) = \frac{\beta^{\alpha}}{\Gamma(\alpha)} x^{\alpha - 1} e^{-\beta x} 1_{(0, \infty)}(x), \quad \text{where} \quad \Gamma(a) = \int_0^\infty u^{a - 1} e^{-u} du,$$

where $\alpha > 0$ and $\beta > 0$. Calculate the mean and variance of **X**.

7. Compute the mean and variance of the uniformly distributed random variable X having pdf

$$f_X(x) = \frac{1}{b-a} 1_{[a,b]}(x).$$

8. (Papoulis 5-35) (The Cheroff Bound) (a) Show that for any $\alpha > 0$ and any $s \in \mathbf{R}$,

$$P(\{e^{s\mathbf{X}} \ge \alpha\}) \le \frac{\phi_{\mathbf{X}}(s)}{\alpha},$$

where

$$\phi_{\mathbf{X}}(s) = E[e^{s\mathbf{X}}].$$

(Hint: Use the Markov Inequality.)

(b) Show that for any $A \in \mathbf{R}$,

$$P(\{\mathbf{X} \ge A\}) \le e^{-sA} \phi_{\mathbf{X}}(s), \quad \forall s > 0,$$

$$P(\{\mathbf{X} \le A\}) \le e^{-sA} \phi_{\mathbf{X}}(s), \quad \forall s < 0.$$

(Hint: Set $\alpha = e^{sA}$ in part (a).)

9. (Papoulis 5-37) (a) Show that if f(x) is a Cauchy density, i.e.

$$f(x) = \frac{\alpha}{\pi(\alpha^2 + x^2)}, \quad x \in \mathbf{R}, \quad \alpha > 0,$$

then the characteristic function $\Phi_{\mathbf{X}}(\omega) = e^{-\alpha|\omega|}$.

(b) Show that if f(x) is a Laplace density, *i.e.*

$$f(x) = \frac{\alpha}{2}e^{-\alpha|x|}, \quad x \in \mathbf{R}, \quad \alpha > 0,$$

then the characteristic function of X is

$$\Phi_{\mathbf{X}}(\omega) = \frac{\alpha^2}{(\alpha^2 + \omega^2)}.$$

- 10. Consider a random variable **X** with characteristic function $\Phi_X(\omega)$.
 - (a) Show that if $\mathbf{Y} = a\mathbf{X} + b$, then $\Phi_Y(\omega) = e^{i\omega b}\Phi_X(a\omega)$.
 - (b) Show that if **X** is a Gaussian RV with mean 0 and variance 1, then

$$\Phi_X(\omega) = e^{-\omega^2/2}.$$

(c) Show that if Y is a Gaussian RV with mean μ and variance σ^2 , then

$$\Phi_Y(\omega) = e^{i\omega\mu - \omega^2\sigma^2/2}.$$
