In what phase (liquid, saturated, vapor, etc.) is water for the following conditions?
a. $\quad T=24^{\circ} \mathrm{C}, p=0.1 \mathrm{bar}(\mathrm{abs})$
b. $\quad p=4$ bar (abs), $T=180^{\circ} \mathrm{C}$
c. $\quad p=20 \mathrm{bar}(\mathrm{abs}), v=0.01 \mathrm{~m}^{3} / \mathrm{kg}$
d. $\quad T=30^{\circ} \mathrm{C}, p=0.04246 \mathrm{bar}$ (abs)
e. $T=30^{\circ} \mathrm{C}, v=1.0043 * 10^{-3} \mathrm{~m}^{3} / \mathrm{kg}$
f. $\quad p=25 \operatorname{bar}(\mathrm{abs}), v=0.07998 \mathrm{~m}^{3} / \mathrm{kg}$

SOLUTION:
a. $\quad T=24^{\circ} \mathrm{C}, p=0.1 \mathrm{bar}$ (abs)

Using Table A. 2 (attached to the end of this example), at $T=24^{\circ} \mathrm{C}, p_{\text {sat }}=0.02985$ bar (abs). Since $p>p_{\text {sat }}$, the water will be in a compressed liquid phase.

b. $\quad p=4$ bar (abs), $T=180^{\circ} \mathrm{C}$

Using Table A. 3 (attached to the end of this example), at $p=4 \mathrm{bar}$ (abs), $T_{\text {sat }}=143.6^{\circ} \mathrm{C}$. Since $T>T_{\text {sat }}$, the water will be in a superheated vapor phase.

c. $\quad p=20$ bar (abs), $v=0.01 \mathrm{~m}^{3} / \mathrm{kg}$

Using Table A. 3 (attached to the end of this example), at $p=20$ bar (abs), $v_{\text {sat liquid }}=1.1767^{*} 10^{-3} \mathrm{~m}^{3} / \mathrm{kg}$ and $v_{\text {sat vapor }}=0.09963 \mathrm{~m}^{3} / \mathrm{kg}$. Since $v_{\text {sat liquid }}<v<v_{\text {sat vapor }}$, the water will be in a saturated (i.e., two phase) phase.

d. $T=30^{\circ} \mathrm{C}, p=0.04246 \mathrm{bar}$ (abs)

Using Table A. 2 (attached to the end of this example), at $T=30^{\circ} \mathrm{C}, p_{\text {sat }}=0.04246 \mathrm{bar}$ (abs). Since $p=p_{\text {sat }}$, the water will be in a saturated (two-phase) phase.

e. $\quad T=30^{\circ} \mathrm{C}, v=1.0043^{*} 10^{-3} \mathrm{~m}^{3} / \mathrm{kg}$

Using Table A. 2 (attached to the end of this example), at $T=30^{\circ} \mathrm{C}, v_{\text {sat liquid }}=1.0043 * 10^{-3} \mathrm{~m}^{3} / \mathrm{kg}$. Since $v=$ $v_{\text {sat liquid, }}$ the water will be in saturated liquid phase.

f. $\quad p=25 \operatorname{bar}(\mathrm{abs}), v=0.07998 \mathrm{~m}^{3} / \mathrm{kg}$

Using Table A. 3 (attached to the end of this example), at $p=25$ bar (abs), $v_{\text {sat vapor }}=0.07998 \mathrm{~m}^{3} / \mathrm{kg}$. Since $v$ $=v_{\text {sat vapor, }}$ the water will be in a saturated vapor phase.
